SERVO VALVES AND PROPORTIONAL VALVES

PRODUCT OVERVIEW OF MECHANICAL AND ELECTRICAL FEEDBACK VALVES FOR INDUSTRIAL APPLICATIONS

Rev. A, April 2025

MOOG | Shaping the way our world moves[™]

Whenever the highest levels of motion control performance and design flexibility are required, you'll find Moog expertise at work. Through collaboration, creativity and world-class technological solutions, we help you overcome your toughest engineering obstacles. Enhance your machine's performance, and help take your thinking further than you ever thought possible.

NOTES

This catalog is for users with technical knowledge. To ensure all necessary characteristics for function and safety of the system, the user has to check the suitability of the products described herein. The products described herein are subject to change without notice. In case of doubt, please contact Moog.

Moog is a registered trademark of Moog Inc. and its subsidiaries. All trademarks as indicated herein are the property of Moog Inc. and its subsidiaries. For the full disclaimer refer to www.moog.com/literature/disclaimers.

For the most current information, visit www.moog.com/industrial or contact your local Moog office.

PRODUCT OVERVIEW

Servo and proportional valves are used in industrial applications to control the position, force or speed of an actuator. To fulfill these control tasks with the highest degree of precision and dynamics, the Moog product portfolio offers servo and proportional valves with integrated closed loop position control for the spool. The spool position feedback and thus the closed loop control is implemented either mechanically and without the involvement of integrated valve electronics or electrically with integrated valve electronics.

Moog is a leader in the development and manufacture of high-performance hydraulic valves. Benefit from over 70 years of experience in the manufacture of servo and proportional valves for the industrial market and experience our products known for their reliability and accuracy.

Servo Valves without Electronics

Moog servo valves without electronics are high performance flow control devices using mechanical feedback (MFB) for the ultimate in precision and reliability. Often used as critical components in hydraulic positioning, velocity, or pressure control applications.

Servo and Proportional Valves with Electronics

Moog servo and proportional valves with integrated electronics and electronic feedback (EFB) enable precise control of position, velocity, pressure or flow at the highest level. They are offered in a variety of standard and customized configurations and are suitable for all types of applications with analog signal or fieldbus.

Servo and Proportional Valves with Special Features

For customers with machines used in demanding environments, Moog offers servo valves and proportional valves with advanced safety features such as fail-safe options, certifications for use in hazardous environments and special performance modifications.

Moog has a long history of providing valves with advanced features needed for applications that are in demanding or even hazardous environments. For example fail-safe versions of some of our most popular valve models are critical to machines in a variety of applications where workers need maximum protection. Our explosion-proof, flameproof and intrinsically-safe line of products offer special designs and modifications needed for the respective certifications.

Special versions:

- Fail-safe versions
- Explosion-proof offering includes intrinsically-safe, flameproof and "increased safety" designs with ATEX and other related approvals
- Spool null cuts
- Light-weight construction and special cabling
- Spool-in-body/bushing and spool assembly construction
- Valve function (Q, p, p/Q)

MECHANICAL FEEDBACK VALVES WITHOUT INTEGRATED ELECTRONICS Specifications and Features

Series	30	31	32	631						
Operation	Pilot operated									
Valve type	Servo valve									
Pilot	Nozzle-flapper									
Electrical interface	Analog									
Control	Flow									
Rated flow at ∆p 70 bar (1,000 psi)	0.95 to 6.9 l/min (0.25 to 1.8 gpm)	3.8 to 15 l/min (1 to 4 gpm)	15 to 30 l/min (4 to 8 l/min)	3.8 to 78 l/min (1 to 20.7 gpm)						
Maximum operating pressure	310 bar (4,500 psi)	275 bar (4,000 psi)		210 to 350 bar (3,000 to 5,000 psi)						
100% step response at 210 bar (3,000 psi)	2.5 ms		4.5 ms	18 ms						
Mounting pattern	Size 01 (ISO 10372-01-01-0-92	Size 2 (ISO 10372-02-02-0-92)	Size 3 (ISO 10372-02-02-0-92)	Size 05 (ISO 4401-05-05-0-94)						
Features and benefits	 Low friction double nozzle pilot stage for high resolution and low hysteresis 	 Low friction double nozzle pilot stage for high resolution and low hysteresis 	 Low friction double nozzle pilot stage for high resolution and low hysteresis 	 Low friction double nozzle pilot stage for high resolution and low hysteresis 						
	 Rugged construction designed for extreme conditions (high shock, vibration or pressure) 	 Rugged construction designed for extreme conditions (high shock, vibration or pressure) 	 Rugged construction designed for extreme conditions (High shock, vibration or pressure) 	 Rugged, long-life design suitable for a wide range of machines 						
	 Ultra-Compact, light weight package 	 Ultra-Compact, light weight package 	Ultra-Compact, light weight package	• Small body size						
	 High response for improved control capability 	 High response for improved control capability 	 High response for improved control capability 	 Integrated fails are options enables machine builders to reduce componentry 						
	 Stainless steel body and integrated torque motor in an environmentally sealed compartment 	 Stainless steel body and integrated torque motor in an environmentally sealed compartment 	 Stainless steel body and integrated torque motor in an environmentally sealed compartment 	 Field-configurable 5th port for separate pilot supply offers greater flexibility Field-confectable first 						
				stage disc filter for ease of maintenance						

MECHANICAL FEEDBACK VALVES WITHOUT INTEGRATED ELECTRONICS

Series	72	728	730	743/744
Operation	Pilot operated	I	1	
Valve type	Servo valve			
Pilot	Nozzle-flapper			
Electrical interface	Analog			
Control	Flow			
Rated flow at ∆p 70 bar (1,000 psi)	95 to 225 l/min (25 to 60 gpm)	225 to 300 l/min (60 to 78 gpm)	4 to 66 l/min (1 to 17.4 gpm)	75 to 400 l/min (20 to 100 gpm)
Maximum operating pressure	210 to 490 bar (3,000 to 7,000 psi)	210 bar (3,000 psi)	210 to 550 bar (3,000 to 8,000 psi)	210 bar (3,000 psi)
100% step response at 210 bar (3,000 psi)	11 to 33 ms	60 ms	7 to 16 ms	25 to 170 ms
Mounting pattern	Size 6 (ISO 10372-06-05-0-92)	Moog standard	Size 4 (ISO 10372-04-04-0-92)	Moog standard
Features	 Low friction double nozzle pilot stage for high dynamics, high resolution and low hysteresis High spool driving forces, rugged design ensures long-life operation Dry torque motor Optional 5th port for separate pilot supply Filtered and filterless models available Field-replaceable first stage filter for easier maintenance 	 Nozzle flapper pilot stage for high dynamics, high resolution and low hysteresis "Simulator" spool cut minimizes pressure change and "bump" through the zero flow null position High spool driving forces, rugged design ensures long-life operation Optional integrated abort manifold/end cap to control motion of actuator to home position in the event of an abort signal Optional asymmetric flow ratios matched to actuator cylinder requirements 	 Nozzle flapper pilot stage for high dynamics, high resolution and low hysteresis High spool driving forces, rugged design ensures long-life operation High Pressure version available for continuous operation at system pressures up to 8,000 psi Intrinsically-safe version available for applications requiring products certified for potentially hazardous environments Optional external pilot supply (X-Port) and return (Y-Port) connections 	 High resolution and low hysteresis High spool driving forces, rugged design ensures long-life operation Intrinsically-safe version available for applications requiring products certified for potentially hazardous environments Optional three coil pilot configuration for added protection against coil failure Field replaceable pilot stage filter Optional fail-safe methods ensure reliable and predictable actuator motion in the event of signal loss Designed to meet all requirements of General Electric Specification 351A7620

MECHANICAL FEEDBACK VALVES WITHOUT INTEGRATED ELECTRONICS

Series	761	771, 772, 773	78	79-100	79-200						
Operation	Pilot operated										
Valve type	Servo valve										
Pilot	Nozzle-flapper										
Electrical interface	Analog										
Control	Flow										
Rated flow at ∆p 70 bar (1,000 psi)	0.5 to 75 l/min (0.125 to 20 gpm)	1.9 to 57 l/min (0.5 to 15 gpm)	75 to 150 l/min (20 to 40 gpm)	115 to 225 l/min (30 to 60 gpm)	400 to 1,000 l/min (100 to 260 gpm)						
Maximum operating pressure	Aluminium body: 315 bar (4,500 psi); steel body: 350 bar (5,000 psi)	210 or 350 bar (3,000 or 5,000 psi)	210 bar (3,000 psi)	210, 310 or 350 ba (3,000, 4,500 or 5,	ar 000 psi)						
100% step response at 210 bar (3,000 psi)	<4 to <16 ms	4 to 17 ms	15 to 40 ms	14 ms	6 to 15 ms						
Mounting pattern	Size 04 (ISO 10372-04-04-0- 92)	(G)771: Size 02 (ISO 10372-02-02- 0-92); (G)772: Size 03 (ISO 10372-03- 03-0-92); (G)773: Moog Standard	Moog standard	Size 6 (ISO 10372- 06-05-0-92)	Moog standard						
Features	 High dynamics, high resolution and low hysteresis High spool driving forces and rugged design ensures long-life operation Intrinsically- safe versions (761K) available for applications requiring products certified for use in potentially hazardous environments 	 High dynamics, high resolution and low hysteresis High spool driving forces Rugged design ensure long-life operation Intrinsically-safe version available for applications requiring products certified for potentially hazardous environments 	 High dynamics, high resolution and low hysteresis Rugged, long-life design Intrinsically- safe (78K) or flameproof versions (78 N) available for applications requiring products certified for potentially hazardous environments Field-replaceable pilot-stage filter for ease of maintenance 	 3-stage Servo Valves for applications that require high flow rates and high performance High spool driving forces, rugged design ensures long-life operation Electrical feedback on the main spool for low hysteresis and excellent linearity Optional external pilot supply and return connections 	 3-stage Servo Valves for applications that require high flow rates and high performance High spool driving forces, rugged design ensures long-life operation Electrical feedback on the main spool for low hysteresis and excellent linearity Optional external pilot supply and return connections

DIRECT DRIVEN SERVO VALVES (DDV)

Series		D633, D634 D636, D637 D638, D639									
Valve type		Servo valves									
Operation		Directly driven by linear force motor									
Pilot		-									
Control		Flow	Flow, pressure, flow&pressure (p/Q), pressure compensated flow, axis (position, velocity, force)								
Mounting p	attern	ISO 4401 Size 03 to 05									
Rated flow psi) per lan	at ∆p 35 bar (500 d	40 to 100 l/min									
Rated flow per land	at ∆p 5 bar (75 psi)	-									
Maximum	Port P, A, B	350 bar (5,000 psi)									
operating	Port T without Y	50 bar (725 psi)									
Port T with Y		D633: 350 bar (5,000 psi); D634: 210 bar (3,000 psi)	D636: 350 bar (5,000 psi); D637: 210 bar (3,000 psi)	D638: 350 bar (5,000 psi); D639: 210 bar (3,000 psi)							
100% step bar (3,000	response at 210 psi)	12 to 20 ms	8 to 14 ms								
Electrical i	nterface	Analog	• Analog								
			• Fieldbus								
Features		 Directly driven design: Pressure-independent dynamic performance 	 Directly driven design: Pressure-independent dynamic performance 	 Directly driven design: Pressure-independent dynamic performance 							
		 Low current consumption at and near hydraulic null 	 Low current consumption at and near hydraulic null 	 Low current consumption at and near hydraulic null 							
		 Spool is in spring-centered position at loss of power supply: Actuator stops 	 Spool is in spring-centered position at loss of power supply: Actuator stops 	• Spool is in spring-centered position at loss of power supply: Actuator stops							
			 Integrated digital electronics with integrated pressure transducer allows a high grade of flexibility 	 Integrated digital electronics with integrated pressure transducer allows a high grade of flexibility 							

DIRECT OPERATED VALVES (DOV)

Specifications and Features

Series		D92x	D93x					
Valve type		Proportional valves	Servo-proportional valves					
Operation		Direct operated by two proportional solenoids	Direct operated by a proportional solenoid					
Pilot		-						
Control		Flow						
Mounting pattern	1	ISO 4401 Size 03 to 05						
Rated flow at Δp	35 bar (500 psi) per land	-	4 to 100 l/min					
Rated flow at Δp	5 bar (75 psi) per land	4 to 75 l/min (1.06 to 19.8 gpm)	-					
Maximum oper-	Port P, A, B	350 bar (5,000 psi)						
ating pressure	Port T without Y	280 bar (4,000 psi) ¹⁾						
	Port T with Y	D926: 350 bar (5,000 psi); D927: 250 bar (3,600 psi)	D936: 350 bar (5,000 psi); D937: 250 bar (3,600 psi)					
100% step respo	nse at 210 bar (3,000 psi)	18 to 28 ms	11 to 18 ms					
Electrical interfa	ce	Analog						
Features		 4/3-way design including rail-safe position reduces need for additional safety components Spool-in-body design built for high rated flow Electronics mechanically uncoupled from housing allows for high vibration resistance for longer service life and less machine downtime Next-generation electronics with digital core and energy efficient components 	 4/4-way design including fail-safe position reduces need for additional safety components Fully hardened spool and bushing provides high accuracy and wear resistance Electronics mechanically uncoupled from housing allows for high vibration resistance for longer service life and less machine downtime Next-generation electronics with digital 					
		 Large variety of spool overlap, flow characteristics, and signal options to fit numerous applications Electronics placed on the solenoid delivers compact design for minimum installation space 	 Next-generation electronics with digital core and energy efficient components lead to low thermal stress and long electronics lifecycle Optimized overlaps and clearances between spool and bushing deliver low internal leakage and high contamination resistance Electronics placed on the solenoid delivers compact design for minimum installation space 					

1) In order to avoid an emptying of the return line, a back pressure of 2 bar (30 psi) should be maintained on the T and Y ports

PILOT OPERATED PROPORTIONAL VALVES

Series		D66x	D67x	D68x	D94x
Valve type		Proportional valves			
Operation		Pilot operated			
Pilot		ServoJet [®] or nozzle-flapper	DDV or ServoJet®	D633	ServoJet [®]
Control		Flow	Flow, pressure, flow&pressure (p/Q), axis (position, velocity, force)	Flow	Flow, pressure, flow&pressure (p/Q), axis (position, velocity, force)
Mounting p	attern	ISO 4401 Size 05 to 10 (N	VG10 to 32)		
Rated flow (500 psi) pe	at ∆p 35 bar er land	-			
Rated flow a psi) per land	at ∆p 5 bar (75 1	30 to 1,500 l/min (8 to 39	96 gpm)		
Maximum	Port P, A, B	350 bar (5,000 psi)			
operating pressure	Port T with Y internal	Depends on Pilot Valve		50 bar (725 psi) to 70 bar (1.000 psi)	-
	Port T with Y external	250 bar (3,600 psi) to 35	0 bar (5,000 psi)		
100% step bar (3,000 p	response at 210 osi)	9 to 48 ms	9 to 40 ms		10 to 41 ms
Electrical ir	terface	Analog			
Features	Iterface	 Optimized design of valve bodies for high rated flow Available as 2- or 3-stage valves, dependent on required dynamics Optional ServoJet* or nozzle-flapper pilot valves Excellent dynamic response due to improved pilot stages Different fail-safe options available allowing the best fit to the application 	 Optimized design of valve bodies for high rated flow Integrated digital electronics for high flexibility Optional pilot stages (DDV or ServoJet*) allow the best fit to the application Excellent dynamic response due to improved pilot stages Different fail-safe options available allow the best fit to the application 	 Optimized design of valve bodies for high rated flow High energy efficiency due to D633 pilot valve with low internal leakage Low range of minimum pilot pressure required Integrated amplifier and control electronics for high functional flexibility Excellent dynamic response due to high natural frequency of pilot stage Different fail-safe options available allowing the best fit to application Optionally available: new pilot valve with integrated electronics and position control of the pilot valve 	 Optimized design of valve bodies for high rated flow Integrated digital electronics with integrated pressure transducer allows a high grade of flexibility Robust ServoJet* pilot valves Excellent dynamic response due to improved pilot stages Different fail-safe options available allow the best fit to the application

PILOT OPERATED SERVO VALVES

Series		D661	D671/2	D791/2					
Valve type		Servo valves							
Operation		Pilot operated							
Pilot		ServoJet [®]	Single or 2-stage ServoJet®	EFB or MFB					
Control		Flow	Flow, pressure, flow&pressure (p/Q), axis (position, velocity, force)	Flow, pressure, flow&pressure (p/Q), axis (position, velocity, force)					
Mounting pa	ttern	ISO 4401 size 05 (NG10)	ISO 4401 size 05 to 07 (NG10 to 16)	• ISO 103742-06-05-0-92 • Special					
Rated flow a (500 psi) pe	t ∆p 35 bar r land	20 to 200 l/min (5.3 to 52.8 gpm)	20 to 240 l/min (5.3 to 63.4 gpm)	100 to 1000 l/min (26.4 to 264 gpm)					
Rated flow a (75 psi) per	t ∆p 5 bar land	-							
Maximum	Port P, A, B	350 bar (5,000 psi)							
operating pressure Y Internal		210 bar (3,000 psi)		With EFB pilot: 70 bar (1.000 psi); with MFB pilot: 210 bar (3,000 psi)					
	Port T with Y external	250 bar (3,600 psi)	250 bar (3,600 psi) or 350 bar (5,000 psi)	350 bar (5,000 psi)					
100% step response at 210 bar (3,000 psi)		6.5 to 18 ms	7 to 19 ms	3 to 12 ms					
Electrical in	terface	Analog	Analog or fieldbus interface						
			Additional analog transducer interfaces						
Features		 Fully hardened spool and bushing provides high accuracy and wear resistance 	 Fully hardened spool and bushing provides high accuracy and wear resistance 	 Fully hardened spool and bushing provides high accuracy and wear resistance 					
		• Improved ServoJet® pilot valve design results in excellent	• Integrated digital electronics for high flexibility	 3-stage valve design for high dynamics 					
		dynamic response	 Robust single or 2-stage ServoJet[®] pilot valves 	 Electrical position feedback (LVDT) - no wear 					
			• Excellent dynamic response due to improved pilot stages	 Integrated electronics with inverse polarity protection 					
				 Optional external pilot supply and return connections via additional x and y port in valve body 					
				 Low threshold and hysteresis, excellent stability at null
